

# TOPPY AMERICA

*Innovative load inverting and pallet transferring technology*

## The world's most complete line of load inverters, pallet changers and in-line systems

Topy load transfer systems are high production machines used to change pallets and invert loads. Topy systems can also position the stacked loads to allow easy access for removal of broken pallets and damaged material.

Topy America offers an exceptional line of mobile and stationary units. Automatic load transfer systems can be integrated with conveyor rollers, pallet stackers and other components to fully automate workflows.

Innovative and versatile, Topy designs set new standards in load inverting and pallet transferring. Our equipment operates in distribution and production facilities worldwide. We provide solutions to pharmaceutical, food, beverage and several other industries.

Topy load inverters and pallet changers eliminate the physical demands of manual lifting and stacking of material.

### Tippy Advance MPI – mobile load inverter

Tippy Advance MPI is an innovative mobile load inverter. It replaces pallets, inverts and transports loads of material. Once in position, it lifts and turns the load in less than a minute with or without applying pressure. It has a proven hydraulic system for lifting and an electrical system for moving, which allows for easy transportation and use in various locations. This unit has an integrated battery charger and does not require dedicated floor space or a permanent electrical connection.

### Tippy Side Grip – mobile pallet changer

Tippy Side Grip is a fast mobile pallet changer used to transfer loads from one pallet to another without tilting or inverting. The unit uses two neoprene-covered plates to gently secure the product on two sides, which allows the product to be lifted off one pallet and transferred to another pallet. A regulator valve allows the operator to control the pressure applied by the side plates to ensure product protection. This unit is equipped with an electric drive allowing for easy transportation and use in various locations within the facility.

### Tippy V Shape – stationary pallet changer

Tippy V Shape is an exceptional high production pallet changer. It is designed with important features to ergonomically and effectively replace pallets. The unique V-shape configuration securely handles various types of loads and materials including bags, drums and boxes. The material is supported on two sides while the pallet is replaced *without* applying pressure, pushing or inverting. Tippy V Shape models are available as automatic units and can be integrated with conveyors to fully automate the process.

### Tippy In-Line System – fully automated load transfer system

Tippy engineers in-line systems designed to fully automate the load transfer process. Tippy pallet changers are integrated with conveyors, pallet stackers and other components to produce a solution that drastically increases production. Tippy engineers work with your specifications to custom design systems and workflows that fit your requirements. In-line systems are designed to automatically replace pallets and insert and remove slip sheets and storage boards. Tippy in-line systems can be integrated into warehouse and storage systems already in operation or in the planning stages.

### Tippy Inverter – stationary load inverter

The Tippy Inverter is an exceptional stationary load turner used to invert material and replace pallets. This unit is constructed using high quality components and is engineered for fast turning cycles and high volume. Tippy Inverter is available in many configurations and sizes. It is offered with a single-moving platform or a synchronized dual-platform system. Floor-level platform models are also available to allow both forklift and pallet jack loading. Tippy Inverter models are available as automatic units and can also be integrated with conveyors to fully automate the process.

*Additional configurations and models are available.*
