Load Transfer Systems and Pallet Inverters

Pharmaceutical - Food - Cosmetic - Material Handling

Toppo load transfer systems and pallet inverters are designed to exchange pallets and invert loads. Toppo systems can also position the stacked load to allow easy access for removal of broken or damaged material. Toppo offers systems to handle various load configurations and materials including bags, drums and boxes stacked on pallets.

Innovative and versatile, Toppo technology has set new standards in load transferring and pallet inverting. Toppo offers both mobile and stationary pallet inverters and pallet exchangers. In addition, Toppo automatic stationary units can be integrated with conveyor rollers, stackers and logistics systems to dramatically increase production.

Topy Pallet Inverters and Exchangers

Topy V Shape Retriever

Topy V Shape Retriever is designed with important features to quickly and effectively replace pallets. The unique V-shape configuration securely handles various types of loads and materials including bags, drums and boxes. V Shape Retriever is engineered to be gentle on the load and operate without damaging the product or pallet. V Shape Retriever can be integrated with conveyor rollers and logistics systems to dramatically increase production.

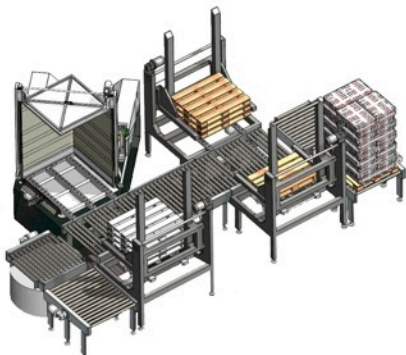

Topy Inverter - Standard and Floor Level

Engineered for high volume operation, Topy Inverter is an effective machine for replacing pallets and turning loads. The Inverter turns the load radially and is equipped with two synchronized moving platforms to keep the load centered. The Standard model is loaded using a forklift. The Floor Level model can be loaded with either a forklift or pallet jack. Topy Inverter can be integrated with conveyor rollers and logistics systems to dramatically increase production.

Topy MPI Advance

Topy MPI Advance is a versatile machine for replacing pallets, turning and transporting loads. The unit is motorized and self-propelled. This feature allows it to be used in various locations. Once in position, it lifts and turns the load in less than one minute. The load can be turned and the pallet replaced with or without applying pressure. Topy MPI Advance does not require dedicated floor space or a permanent electrical connection. Topy MPI Advance is available in a wide-base configuration for closed-bottom pallets.

Topy Logistics Systems

Topy automatic stationary pallet inverters and exchangers can be integrated with conveyor rollers, mobile curtains, stackers and other transfer systems to automatically replace pallets and invert loads. Logistics systems can dramatically increase production and improve workflow. Topy will create a customized system to meet the specific needs of your operation.
